Sequence 49, Application US/09005243
; Patent No. US20020018763A1
; GENERALINFORMATION:
; APPLICANT: Zebo, Krisztina M.
APPLICANT: Suggs, Sidney V.
; APPLICANT: Martin, Francis H.
; TITLE OF INVENTION: Stem Cell Factor
; NUMBER OF SEQUENCES: 104
; CORRESPONDENCE ADDRESS:
; ADDRESSEE: Marchall, O'Toole, Gerstein, Murray & Borun
STREET: 6300 Sears Tower, 233 South Wacker Drive
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Length 273;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                CITY: Chicago

Sequence 529, Application US/11176830

Sequence 529, Application US/11176830

Publication No. US20060020116A1

GENERAL INFORMATION:

APPLICANT: Gartier, Rene

APPLICANT: Gartier, Rene

APPLICANT: Drittanti, Lila

APPLICANT: Drittante

TITLE OF INVENTION: Rational Evolution of Cytokines for Higher Stability, Encoding N.

TITLE OF INVENTION: Acid Molecules and Related Applications

TITLE OF INVENTION: Acid Molecules and Related Applications

TITLE OF INVENTION NUMBER: US/11/176,830

CURRENT FILING DATE: 2003-09-08

PRIOR FILING DATE: 2003-03-21

PRIOR APPLICATION NUMBER: 60/457,135

PRIOR APPLICATION NUMBER: 60/457,135

PRIOR APPLICATION NUMBER: 60/409,898

This human MGF has a mature extracellular region of 185 amino acids. There is a second form of hMGF (see AAQ20844) resulting from an additional use an explicing event which deletes an exon encoding an additional 28 amino acids beginning at amino acid 148 of the mature protein. MGF is the ligand for the protein receptor expression product of the c-kit proto-oncogene. MGF can be used to augment the activity of other cytokines. It can influence early lymphoid or myeloid development. See also AAQ20842-3 and AAQ22204-7. (Updated on 25-MAR-2003 to correct PA field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          KOLKKSFKSPEPRLFTPEEFFRIFNRSIDAFKOFVVASETSDCVVSSTLSPEKDSRVSVT 180

```
AAR83978 is a human stem cell factor (SCF) derived from the HT1080
fibrosarcoma cell line. Non-naturally occuring SCF and C-terminally
curricated polypetides, having amino acid sequences sufficiently
duplicative of naturally ocurring SCF, stimulate growth of primitive
progenitors such as haematopoietic progenitor cells, neural stem cells
and primordial germ stem cells. The peptides can be used in a composition
for treating leucopenia, anaemia or thrombocytopenia, for enhancing
engraftment of bone marrow during transplantation or for bone marrow
convery after chemcherapy or radiation-induced bone marrow aplasia, nerve
damage, infertility, intestinal damage or myeloproliferative disorders.
Antibodies may be raised against the peptides for use in detection or
myelosupplastiantion of SCF in serum. SCF may be useful for the treament of
AIDS and severe combined immunodeficiency (SCID) states alone or in
combination with other factors such as IL-7. (Updated on 25-MAR-2003 to

Stem cell factors are also known as mast cell growth factors (MCF). Stem cell factors (SF or SLF) are haematopoietic to growth factors (MCF). Stem cell factors (SF or SLF) are haematopoietic c factors which act on haematopoietic progenitor cells. Analogues of a wild type SCF sequence have been constructed (see AAM27605 and AAW27606) which have increased biological activity and stability compared to unmodified SCF and can be used treat pigmentation disorders, e.g. vitilago, acquired immunodeficiency syndrome, nerve damage, infertility, intestinal damage or a haematopoietic disorder, e.g. leucopaenia, thrombocytopaenia or anaemia, enhance bone marrow engraftement during transplantation or bone marrow recovery following radiation, chemical or chemotherapeutic, induced bone marrow aplasia or myelosuppression, sensitise cells to chemotherapy or mobilise peripheral blood progenitor cell, preferably bone marrow or peripheral blood progenitor cell, uniture medium, where the cells are optionally subsequently transfected with exogenous DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     MDVLPSHCWISEMVVQLSDSLTDLLDKFSNISEGLSNYSIIDKLVNIVDDLVECVKENSS 120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Stem cell factor analogue N10D or N10D/N11D - useful to treat pigmentation disorder, AIDS, nerve damage, infertility, intestinal damage or haematopoietic disorder.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           KPFMLPPVAASSLRNDSSSSNRKAKNPPGDSSLHWAAMALPALFSLIIGFAFGALYWKKR 240

                                                                                                                                                                                                                                                                                                  g
                                                                                                                                                                                                                                                                                                                                                                   A method has Deen developed or maxing negative cuts subtract to administration to a subject. The method comprises: (a) obtaining the dematopoietic progenitor cells from a donor; and (b) expanding the cells by adding to the cells a haematopoietically effective dose of a polypeptide product having at least part of the primary structural confirmation and one or more of the biological properties of naturally confirmation and one or more of the biological properties of naturally confirmation and one or more of the biological properties of naturally confirmation are capable of maturing to erythroid, megakaryocyte, granulocyte, lymphocyte and macrophage cells. SCF results in absolute increases in hemantopoietic cells of both myeloid and lymphoid lineages. SCF is useful for treating haematopoietic disorders. The method is useful for expanding early haematopoietic progenitors in syngeneic, allogeneic contact of gene therapy based on transfecting haematopoietic stem cells. SCF is also useful for combating the myelosuppressive effects of anti-HIV drugs such as AZT and for enhancing haematopoietic recovery after acute blood loss and as a boost to the immune system for fighting compalsia (cancer). The present sequence represents a specifically compalsia (cancer). The present invention
method has been developed of making haematopoietic cells suitable for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Production of hematopoietic cells suitable for administration to a subject using progenitor cells and expanding the cells using stem cell

vitro, comprising exposing (II) that expresses a stem cell factor (SCF) receptor to a biologically active SCF, its analogue or fragment, which induces cell proliferation, and introducing (I) to (II) in vitro. Exposure of SCF to (II) results in increased uptake of (I) into the cell. The method is useful for enhancing the efficiency of the transfer of a polynucleotide into a terget mammalian cell in vitro. The method is useful in gene therapy techniques. Addition to Addition of the present AAB99390 represent sequences used in the exemplification of the present

                                                                                                                                             The present invention describes a method for enhancing (B) the efficiency of transfer of a polynucleotide (I) into a target mammalian cell (II) in vitro, comprising exposing (II) that expresses a stem cell factor (SCP) receptor to a biologically active SCF, its analogue of fragment, which induces cell proliferation, and introducing (I) to (II) in vitro. Exposure of SCF to (II) results in increased uptake of (I) into the cell. The method is useful for enhancing the efficiency of the transfer of a polynucleotide into a target mammalian efficiency of the method is useful in gene therapy techniques. AAM41301 to AAM41364 and AAB98351 to AAB98390 represent sequences used in the exemplification of the present

The present invention provides the protein and coding sequences of mammalian stem cell factors (SCFs). These are capable of stimulating the growth of early haematopoietic progenitor cells, neural stem cells and primordial germ stem cells. The sequences are useful in the treatment of leukaemias, haematopoietic disorders, aplastic anaemia, paroxysmal naemoglobinuria, malaria, pigmentation disorders, neurological and intestinal damage, infertility, AIDS and severe combined immunodeficiency (SCID). The present sequence is an SCF described in the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present sequence representing human SCF (stem cell factor) protein is isolated from the HT1080 fibrosarcoma cell line. The present invention call sequence from the HT1080 fibrosarcoma cell line. The present invention cells and the collaboration cells from the HT1080 fibrosarcoma cells. Adu02453, Adu02458, Adu02461, and the collaboration cells including early haematopoietic progenitor cells. The invention also describes SCF peptides (Adu02462-Adu02481) and the oligonucleotides.

(AASO4081-AASO4117) used in the isolation of human and rat SCF sequences. The polynucleotide encoding SCF is useful for producing SCF and useful in the isolation of human, and rat SCF sequences. The polynucleotide encoding SCF is useful for producing SCF and useful in the isolation, as myelofibrosis, metastatic carcinoma, acute leukaemia, multiple myeloma, Hodgkin's disease, lymphoma, Gaucher's disease, anaemia, congestive splenomegaly, Kala azar, sarcoidosis, military tuberculosis, disseminated fungus disease, Pulminating septicemia, malaria, vitamin B12 and folic acid deficiency, pyridoxine deficiency, and hypopigmentation constitution as piebaldism and vitiligo
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     240

These are capable of stimulating the growth of early haematopoietic progenitor cells, neural stem cells and primordial germ stem cells. The sequences are useful in the treatment of leukaemias, haematopoietic disorders, aplastic anaemia, paroxysmal naemaglobinuria, malaria, pigmentation disorders, neurological and intestinal damage, infertility, AIDS and severe combined immunodeficiency (SCID). The present sequence is an SCF described in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Novel isolated non-human mammalian stem cell factor polypeptide stimulating growth of early hematopoietic progenitor cells, useful for treating aplastic anemia, lymphoma, Letterer-Siwe disease, Kala azar, sarcoidosis.

These are capable of stimulating the growth of early haematopoietic progenitor cells, neural stem cells and primordial germ stem cells. The sequences are useful in the treatment of leukaemias, haematopoietic disorders, aplastic anaemia, paroxysmal nemoglobinuria, malaria, pigmentation disorders, neurological and intestinal damage, infertility, AIDS and severe combined immunodeficiency (SCID). The present sequence is an SCF described in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   MDVLPSHCWISEMVVQLSDSLTDLLDKFSNISEGLSNYSIIDKLVNIVDDLVECVKENSS 120

The present sequence representing human SCF (stem cell factor) protein is isolated from the HT1080 fibrosarcoma cell line. The present invention crlates to novel stem cell factors (AAB73561-AAB735571-AAB73556) and the polynucleotides encoding them. SCF stimulate primitive progenitor cells including early haematopoletic progenitor cells. The invention also describes SCF peptides (AAB73578-AAB73597) and the oligonucleotides (AAB73359) and the oligonucleotides (AAB73359) and the oligonucleotides (AAB73859) used in the isolation of human and rat SCF sequences. The polynucleotide encoding SCF is useful for producing SCF and useful in gene therapy. It is useful for treating disorders involving blood calls such as myelofibrosis, metastatic carcinoma, acute leukaemia, multiple myeloma, Hoddkin's disease, lymphom, Gaucher's disease, anaemia, congestive splenomegaly, Kala azar, sarcoidosis, military tuberculosis, disseminated fungus disease, Pulminating septicaemia, malaria, vitamin 312 and folic acid deficiency, pyridoxine deficiency, and hypopigmentation disorders such as piebaldism and vitiligo
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   1 MKKTQTWILITCIYLQLLLFNPLVKTEGICRNRVTNNVKDVTKLVANLFKDYMITLKYVPG

The present sequence represents human stem cell factor (SCF). The cDNA encoding this sequence is isolated from the HT1080 fibrosarcoma cell line. The sequence is described in an invention relating to novel stem cell factors, the polynucleotides encoding them and methods for producing the stem cell factors. The methods involve increasing the number of early haematopoietic progenitor cells in human peripheral blood by administering a haematopoietically effective human stem cell factor polypoptide. The methods are useful for the treatment of blood disorders, including myelofibrosis, myelosclerosis, osteopetrosis, metastatic carcinoma, acute leukaemia, multiple myeloma, Hodgkin's disease, ilymphoma, Gaucher's disease, Niemann-Pick disease, refractory anaemia, malain, vitamin B12 and folic acid deficiency, hypopigmentation disorders i.e. piebaldism and viral induced disorders, including AIDS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            MDVLPSHCWISEMVVQLSDSLTDLLDKFSNISEGLSNYSIIDKLVNIVDDLVECVKENSS 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     셤
                                                                                                                                                                                                                                                                                                                                                                                                 The present sequence representing human SCF (stem cell factor) protein is isolated from the HT1080 fibrosarcoma cell line. The present invention relates to novel stem cell factors (AAM02767, AAM02770-AAM02775, AAM02779) and the polymuclectides encoding them. SCF stimulate primitive progenitor cells including early haematopoietic progenitor cells. The invention also describes SCF peptides (AAM02777-AAM02794) and the olymuclectides (AAM02777-AAM02795) and the care SCF sequences. The polymuclectide encoding SCF is useful for rat SCF sequences (AAS04182-AAS04218) used in the isolation of human and rat SCF sequences (AAS04182-AAS04218) used in the isolation of human and rat SCF sequences (AAS04182-AAS04218) used in the isolation of human and care SCF sequences (AAS04218) used in the isolation of human and rat SCF sequences (AAS04218) used in the isolation of human and carcinoma, acute leukaemia, multiple myelofibrosis, metastatic carcinoma, acute leukaemia, multiple myelofibrosis, alisease, lansemia, congestive splenomegaly, Kala azar, lancolosis, military tuberculosis, disseminated fungus disease, pulminating septicemia, malaria, vitamin B12 and folic acid deficiency, pyridoxine deficiency, and hypopigmentation disorders such as piebaldism
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  KDLKKSFKSPEPRLFTPEEFFRIFNRSIDAFKDFVVASETSDCVVSSTLSPEKDSRVSVT 180

Sequences of the invention are useful for treating leucopaenia, thrombocytopaenia,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Human; stem cell factor; SCF protein; leucopaenia; thrombocytopaenia; anaemia; myelosuppression; nerve damage; myeloproliferative disorder; infertility; neoplasia; myelofibrosis; myelogroliferative disorder; metastatic carcinoma; acute leukaemia; multiple myeloma; sarcoidosis; Hodgkin's disease; lymphoma; Gaucher's disease; Niemann-Pick disease; Letterer-Siwe disease; refractory erythroblastic anaemia; Kala azar; bi Guglielmo syndrome; consestive splenomegaly; splenic pancytopaenia; diseaminated fungus disease; Pulminating septicaemia; piebaldism; AIDS; acquired immune deficiency syndrome; malaria; military tuberculosis; pyridoxine deficiency; vitemin B12 deficiency; folic acid deficiency; blamond Blackfan anaemia; hypopigmentation disorder; vitiligo.

Int. J. Hematol. 55.301-304(1922).

-!- FUNCTION: Stimulates the proliferation of mast cells. Able to augment the proliferation of both myceloid and lymphoid hematopoietic progenitors in bone marrow culture. Mediates also cell-cell adhesion. Acts synergistically with other cytokines, probably interleukins.

-!- SUBCMIT: Homodimer, non-covalently linked (Probable).

-!- SUBCELLULAR LOCATION: Type I membrane protein (isoforms 1 and 2).

The profile of the EMBL/GenBank/DDBJ databases.
Submitted (JAN-2000) to the EMBL/GenBank/DDBJ databases.

- I- FUNCTION: Stimulates the proliferation of mast cells. Able to augment the proliferation of both myeloid and lymphoid hematopoietic progenitors in bone marrow culture. Mediates also cell-cell adhesion. Acts synergistically with other cytokines, probably interleukins (By similarity).

- SUBGELLULAR LOCATION: Type I membrane protein. Also exists as a secreted soluble form (By similarity).

- PTMR A soluble form is produced by proteolytic processing of the extracellular domain (By similarity).

- SIMILARITY: Belongs to the SCF family.

-!-FUNCTION: Stimulates the proliferation of mast cells. Able to augment the proliferation of both myeloid and lymphoid hematopoietic progenitors in bone marrow culture. Mediates also cell-cell adhesion. Acts synergistically with other cytokines, probably interleukins (By similarity).
-!-SUBGNIT: Homodimer, non-covalently linked (Probable).
-!-SUBCELIOLAR LOCATION: Type I membrane protein (isoforms I and 2) Also exists as a secreted soluble form (isoform I only) (By similarity).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        G (in

Theorems stem cell factor/c-kit ligand: its molecular cloning and localization within the uterus.";

Biol. Reprod. 50:95-102(1994).

I Biol. Reprod. 50:95-102(1994).

I Biol. Reprod. Stimulates the proliferation of mast cells. Able to augment the proliferation of both myeloid and lymphoid hematopoietic progenitors in bone marrow culture. Mediates also cell-cell adhesion. Acts synergistically with other cytokines, probably interleukins (By similarity).

I SUBGRILUIAR LOCATION: Type I membrane protein. Also exists as a secreted soluble form (By similarity).

I SUBCALLUIAR LOCATION: Type I membrane protein. Also exists as a secreted soluble form (By similarity).

I PTM: A soluble form is produced by proteolytic processing of the extracellular domain (By similarity).

I SIMILARITY: Belongs to the SCF family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Bukaryota, Metazoa, Chordata, Craniata, Vertebrata, Buteleostomi,

                                                                                                                                                                                                                                                                                                                                                                                                                                            Isola-Q28132-2; Sequence=VSP 006020;
PTM: A soluble form is produced by proteolytic processing of
isoform 1 in the extracellular domain (By similarity).
POLYMORPHISM: The roan locus is responsible for the coat
coloration of Belgian Blue and Shorthorn cattle. The solid-colored
and white animals are homozygotes, and the roan animals, with
intermingled colored and white hairs, are heterozygous. The roan
phenotype is due to the ASP-218 mutation.
SIMILARITY: Belongs to the SCF family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   1 MKKTQTWIITCIYLQLLFPPLVHTQGICSNRVTDDVKDVKLVANLPKDYMITLKYVPG

Mamm. Genome 10:710-712(1999).

-!- FUNCTION: Stimulates the proliferation of mast cells. Able to augment the proliferation of both myeloid and lymphoid hematopoietic progenitors in bone marrow culture. Mediates also cell-cell adhesion. Acts synergistically with other cytokines, probably interleukins (By similarity).
-!- SUBGNIT: Homodimer, non-covalently linked (Probable).
-!- SUBCLILUIAR LOCATION: Type I membrane protein (isoforms 1 and 2).
Also exists as a secreted soluble form (isoform 1 only) (By similarity).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  MKKTQTWILTCIYLQLLLFNPLVKTEGICRNRVTNNVKDVTKLVANLPKDYMITLKYVPG
